

WELCOME TO THE TIDYVERSE

HADLEY WICKHAM

MONDAY, AUGUST 28TH, 5:00PM-6:30PM
101 JORDAN HALL OF SCIENCE

Hadley Wickham has been a prime mover in releasing R upon the masses, enabling hordes of unsuspecting would-be researchers the ability to process and visualize data in ways they never dreamed of. The tidyverse is the culmination of years of effort in the R language, a universe of packages that facilitate a grammar of data, graphics, and modeling that allows even beginners to speak the language of data science fluently. Author of several books on programming and dozens(!) of R packages that are among the most widely used in the realm of data, Hadley Wickham invites you personally to experience the thrill of diving deep into data, discovering unknown treasures, and coming out on the other side with a fuller understanding of the way in which the world works!

Join us for a casual evening of computing comradery.

Bio

Hadley Wickham is the Chief Scientist at RStudio, and an Adjunct Professor of Statistics at the University of Auckland, Stanford University, and Rice University. He build tools (computational and cognitive) that make data science easier, faster, and more fun.

This event is hosted by the MS-ACMS: Data Science program, with the co-sponsorship of the Mendoza College of Business MSBA program, and the Office of the Provost.
